Keyboard layout:

- CPX may be combined with all stack operations, +, -, x, /, ±, x^2, √x, 1/x, //, Γ, IxI, RND, as well as (HYP) SIN, COS, TAN, LN, LG_y and their inverses
- Modes are HMS, 2, 8, 10, 16, .d, b/c, FIX, SCI, ENG, DEG, RAD, GRAD
- → may be combined with H, HMS, DEG, RAD

Active operations in integer modes. , is for addressing only (see below). In hexadecimal mode, the top left 6 keys are used for numeric input when f-shifted.

Active operations in alpha mode. → is for addressing only (see below). The basic arithmetic keys, ±, and the labels printed in *italics* will insert the respective characters.

ADDRESSING REGISTERS AND VARIABLES

1	User input	[RCL], [STO], [VIEW], [x≷], [SF], [CF], [F?], or [x=?] etc.		
	Display	**OP _** (e.g. RCL _)		
2	User input [1]	[.]	*Register number* ([0] [0] … [9] [9]) [2]	[→]
	Display	**OP s _** Alpha mode is set.	**OP *nn*** e.g. x<> 15	**OP → _**
3	User input	[X], [Y], [Z], [T], or [L]	[.]	*Register number* ([0] [0] … [9] [9])
	Display	**OP s *x*** e.g. STO sZ	**OP →s _** Alpha mode is set.	**OP → *nn*** e.g. RCL →03
4		Store ***x*** in stack level **z**.	[X], [Y], [Z], [T], or [L]	Recall the content of the register where register **3** points to.
	Display	Show the content of the register where **LASTx** points to.	**OP →s *x*** e.g. VIEW →sL	

[1] For **RCL** and **STO**, an arithmetic operator (+, –, ×, / , ^) may precede step 2. The comparison operators set alpha mode implicitly and need an [ENTER↑] to leave it.

[2] For any of the lowest 10 registers, you may enter e.g. [5] [ENTER↑] instead of [0] [5] .

ADDRESSING LABELS

1	User input	GTO or XEQ , LBL, SOLVE, INTEG [3]		
	Display	**OP _** (e.g. GTO _)		
2	User input	ENTER↑	→	
	Display	**OP "_** Alpha mode is set.	**OP → _**	
3	User input	*Label* + ENTER↑ [4]	.	*Register number* (0 0 … 9 9)
	Display	**OP "*name*"** e.g. SLV"STF"	**OP →s _** Alpha mode is set.	**OP → *nn*** e.g. XEQ →03
4		Solve the function **STF** (with STF keyed in).	X , Y , Z , T , or L	Execute the routine which's label is in register **3**.
	Display	Integrate the function which's label is in stack level **y**.	**OP →s *x*** e.g. INT →sY	

[3] **SOLVE** and **INTEG** will be displayed as SLV and INT, respectively. **LBL** sets alpha mode implicitly and will only allow alphanumeric labels as argument.

[4] A label may consist of up to 3 alphanumeric characters. ENTER↑ is needed if less than 3 characters are entered, only.

INDEX OF OPERATIONS

Name	Keys to press	Works in modes	Remarks
A … F	f A etc.	16	
ABS	f |x|	\a	
ACOS	g COS^{-1}	.d	
ACOSH	g HYP^{-1} COS	.d	
ASIN	g SIN^{-1}	.d	
ASINH	g HYP^{-1} SIN	.d	
ATAN	g TAN^{-1}	.d	
ATANH	g HYP^{-1} TAN	.d	
ALL	h X.FCN ...	.d	
AND	g AND	2, 8, 10, 16	
AOFF	f ALPHA	a	
AON	f ALPHA	\a	
ASR	h X.FCN ...	2, 8, 10, 16	
A0	h L.R.	.d	Calculates the intercept of the fit curve.
A1	h L.R. x≷y	.d	Calculates the slope of the fit curve.
BASE+	+	2, 8, 10, 16	
BASE–	−	2, 8, 10, 16	
BASE×	×	2, 8, 10, 16	
BASE/	/	2, 8, 10, 16	
BASE+/–	+/−	2, 8, 10, 16	
BC?	h X.FCN ...	2, 8, 10, 16	
BINM	f 2	\a	
BST	▲	PRGM	

Name	Keys to press	Works in modes	Remarks
BS?	h X.FCN ...	2, 8, 10, 16	
CB	h X.FCN ...	2, 8, 10, 16	
CF	h CF	All	
CHS	+/-	.d	
CLALL	h CLALL	All	
CLPRGM	h CLPR	PRGM	
CLRG	h CLALL	All	
CLST	0 f FILL	All	
CLX	h CLx	All	
CLΣ	h CLΣ	.d	
COMB	f Cx,y	.d	
COMPLEX	CPX …	.d	Indicating complex operations, acting on ***x*** and ***y***, where **x** contains the real part and **y** the imaginary of the complex number. This key may be combined with any function which's name is printed in *italics* in this table.
CONJ	h CONJ	.d	Changes the sign of ***y***.
CORR	g r	.d	
COS	f COS	.d	
COSH	f HYP COS	.d	
DECM	f .d	\a	
DEG	h DEG	\a	
DENMAX	h X.FCN ...	.d	Sets the maximum denominator for fractions.
DSE	f DSE address	PRGM	
EEX	E	.d	
ENG	h ENG #	.d	
ENTER↑	ENTER↑	All	

Name	Keys to press	Works in modes	Remarks
EXPF	h X.FCN ...	.d	Selects the exponential curve fit model.
E↑X	g e^x	.d	
E↑X-1	h X.FCN ...	.d	
FACT	h !	.d	
FCSTX	h X.FCN ...	.d	
FCSTY	f $\hat{y}$	.d	
FC?	h X.FCN ...	All	
FC?C	h X.FCN ...	All	
FILL	f FILL	All	Copies ***x*** in **y**, **z**, and **t**.
FIX	h FIX #	.d	
FP	g FP	.d	
FRACM	g b/c	.d	
FS?	h FS?	All	
FS?C	h X.FCN ...	All	
GAMMA	h X.FCN ...	.d	
GRAD	h GRAD		
GTO	h GTO label	PRGM	Like in HP32S
		\PRGM	
	h GTO . label	\PRGM	
	h GTO . .	\PRGM	
HEXM	g 16	\a	
HMSM	g HMS	.d	
HMS+	+	HMS	
HMS–	−	HMS	

Name	Keys to press	Works in modes	Remarks
HR	f H	HMS	Leaves HMS mode. Any HMS data in **x** will be converted to decimal.
IDECM	f 10	\a	
INPUT	h INPUT var	All	
INTEG	f INTEG	.d	
IP	f IP	.d	
ISG	g ISG	PRGM	
LASTX	g LASTx	All	
LBL	f LBL label	PRGM	
LOGY	f LGy	.d	Calculates the logarithm for base ***y***.
LOG2	f LG2	.d	Calculates the logarithm for base 2.
LINF	h X.FCN ...	.d	Selects the linear curve fit model.
LJ	h X.FCN ...	2, 8, 10, 16	
LN	f LN	.d	
LN1+X	h X.FCN ...	.d	
LOG	f LOG	.d	
LOGF	h X.FCN ...	.d	Selects the logarithmic curve fit model.
MASKL	h X.FCN ...	2, 8, 10, 16	
MASKR	h X.FCN ...	2, 8, 10, 16	
MEAN	f $\bar{x}$	.d	
MOD	h MOD	\a	
NBITS	h X.FCN ...	2, 8, 10, 16	Corresponds to #B on HP16C
NOT	g NOT	2, 8, 10, 16	
N!	h X.FCN ...	.d	
OCTM	g 8	\a	

Name	Keys to press	Works in modes	Remarks
OFF	g OFF	All	
	h X.FCN ...	PRGM	
ON	C	Calc. off	
	h X.FCN ...	PRGM	
OR	g OR	2, 8, 10, 16	
PAUSE	h PAUSE	PRGM	
PERM	g Py,x	.d	
PGOFF	h PRGM	PRGM	
PGON	h PRGM	\PRGM	
PI	h π	.d	
	F3	.d	As long as no reassignment took place.
PWRF	h X.FCN ...	.d	Selects the power curve fit model.
QZ	f Qz	.d	
RAD	h RAD	.d	
RAN	h RN#	\a	
RCL	RCL reg	All	
RCL+	RCL + reg	All	
RCL–	RCL − reg	All	
RCL×	RCL × reg	All	
RCL/	RCL / reg	All
